

The LCO Group Offers 24x7 Critical System Monitoring for your Network

Network monitoring is the backbone of a truly proactive approach to network support. Networks that have no monitoring are akin to cars running without dashboard gauges. Simple, easy-to-fix issues can blossom into full-blown emergencies without a proper monitoring solution on your network.

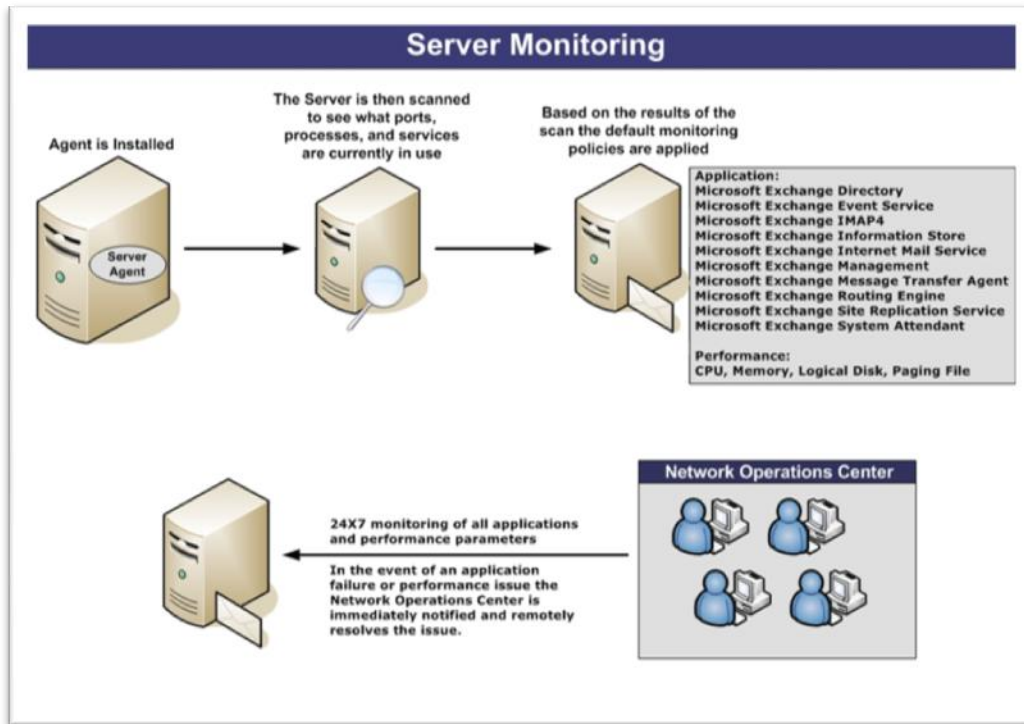

At The LCO Group, we provide 24x7 monitoring services, remote troubleshooting and remote network management, and clear escalation policies and guidelines. We pride ourselves on being a proactive support provider, and believe that every client should have a monitoring solution in place; no matter how simple it may be.

Easy to Understand Detailed Reports

You will receive daily, weekly, and/or monthly reports. Reports cover over 24 different categories including bandwidth usage, employee internet usage, attack reports, top visited sites and much more.
