THE LCO GROUP

MANAGED IT SERVICES

93% of companies that lost their data center for more than 10 days due to disaster filed for bankruptcy within one year of the disaster.

Why Cloud Backup?

Your company's financial records, contracts and client information are the foundation of your business. When you consider all of the information stored on your company's servers, you begin to realize the potential magnitude of loss in the event of a disaster, sabotage, hardware failure or human error. The Cloud Backup solution allows you to back up your critical business data to a remote and secure location for rapid disaster recovery - an important part of your data security and business continuity plan.

Could Your Business Recover?

The fact is that 56% of companies cannot recover data after a catastrophe. A majority of businesses today either lack the protection they need or are under-protected from disaster. We find that businesses rely too heavily on onsite or local backups, such as to tapes or storage. Local backups do not protect you from fire, flood, sabotage and natural disasters. We offer facilities that provide best-in-class redundancy and performance, high availability, and superior storage efficiency to dramatically reduce the cost of achieving world-class disaster recovery.

Why Our Service?

Cloud Backup is a business-class online data backup and recovery service that safeguards critical business data at a secure offsite location. Using the highest levels of compression and encryption available, the Cloud Backup solution enables businesses to automatically protect digital information and restore it anytime from any location. By choosing Cloud Backup, you will benefit from the best automated backup technology available, military-grade security, 24x7 access to your data, and world-class customer support. Whether you are a home-based business or an enterprise corporation, Cloud Backup provides the same ease-of-use and efficiency at an affordable cost.

How Does Cloud Backup Work?

Our agentless software is installed onto one computer or server

You establish the automated backup schedule.

The data is compressed and encrypted.

The data is transferred offsite to a secure data center. A report is generated.

The data is backed up again, providing a second offsite copy.

The data is stored on hard drive disk arrays for rapid online recovery.

The data can be restored at any time from any computer.

What Does the Cloud Backup Service Include?

Cloud Technology

-Agentless Client
-Fully Automated
