The LCO Group - Business Disaster Recovery Done Right

In this era of uncertainty, a well-planned disaster recovery and business continuity plan are essential components to minimizing risk exposure. And yet, most small to midsize businesses still rely on old tape backup systems or untested 'failover' solutions. At The LCO Group, we have taken a hard look at the current disaster recovery offerings on the market. We analyzed which solutions offered the highest availability and recovery, while maintaining reasonable cost and high value. We are proud to offer a plan that merges next generation technology with ease-of-use, quick-recovery time, and lowest cost of ownership.
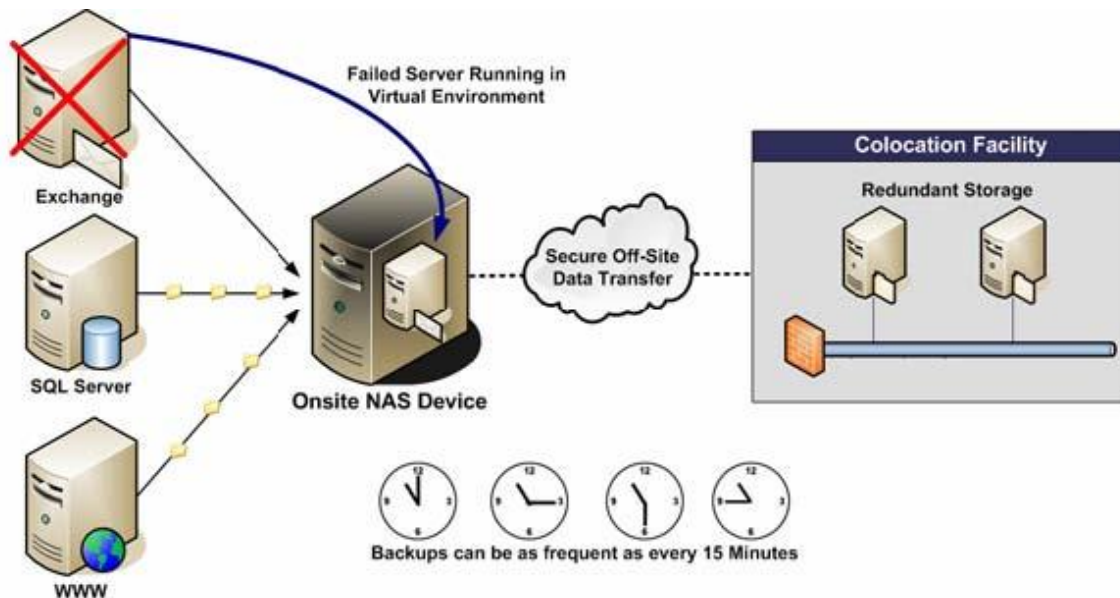

Our Solution

We place a NAS device at the customer location, that does a raw, block level backup image of the server that is an exact duplicate of the onsite server (all server types, including Exchange, SQL Server, File/Print, Domain Controllers, etc. are supported). In the event of a server failure, a 'virtual server', which is a duplicate, mirror copy of the original server, is brought online on the NAS device - allowing full server functionality and keeping your business functioning (one NAS can support ten servers). Additionally, an offsite replicant of the NAS device itself is done, to ensure that a complete local site disaster does not bring you down.

BUSINESS CONTINUITY AND DISASTER RECOVERY

The LCO Group's BDR solution combines high availability, full redundancy, and lowest cost of ownership.

Bare Metal Restore

Backup and Recovery

Standby Servers

Offsite Replication

Failed Server Running in Virtual Environment

Exchange

SQL Server

WWW

Onsite NAS Device

Secure Off-Site Data Transfer

Colocation Facility

Redundant Storage

Backups can be as frequent as every 15 Minutes
